

Fellows, who and where has already used this method and what results were achieved? There are many people with diseases, which can be effectively treated, emailed me asking if there are other clinics in other cities, except my own in Krasnodar, which are using this method RANC. On the other hand, people wrote that they tried to apply this method and got quite good results. I have such information from different cities like Tbilisi, Vladivostok, Rostov-on-Don, Murom, Zhezkazgan. I have received phone calls from Ekaterinburg, Moscow, Stary Oskol, Estonia. Some people simply wrote that they are satisfied with results and never said where they are from.

One thing I know for sure, there is one woman in Moscow, very active and smart. Firstly, she had read the website, then she came to Krasnodar to experience the procedure on herself. After that, she phoned me several times for an advice on different technical questions and told me that she was getting very good result using my method and that she already has a queue of people who want to try this out. I was glad to hear that.

Ideally, this method every nurse should know, in this case she will have a lot of clients. Moreover, this procedure is actually should be performed by medical assistant. That is why I decided it will be good idea if other people from different cities who need help will know where the method is already used. Perhaps in your city somebody is already using this procedure which is simply a modification of paravertebral block.

I suggest everybody who has already used this method leave your reviews on this page. If you are a practicing doctor or a medical assistant, I suppose, your potential clients would like to know about your work. If any questions about this topic occur, I will try to answer them. Thank you all, who will respond to this letter, in advance.
