

I would like to ask you to consider all said further just as my imagination, which in fact has nothing to do with the reality, though, you will estimate, if it is so. Definitely, this website should contain materials responding “medical” questions, but when you try to answer them, you meet some queries, which you can’t explain. Medical procedures, that we perform, and the ones, performed in Karlovy Vary (what Czech Dr. Igor wrote to us recently) fulfill their role. Certainly, the RANC method is effective, and there’s no need to meet me personally to realize it; it’s enough to consult any doctor in your city, and if he is not afraid to perform the procedure, you will see the result.

There is a joke " The further into the woods, the thicker the partisans ". In my opinion, it has the following meaning: the more we delve into the knowledge of the unknown, the more questions gain from it; and such funny sayings are necessary to make things less uneasy as they could be. Let’s pay attention to the title of this article. Probably, it has a stupid and provocative name, as well it’s silly, perhaps, to believe in the existence of the electron, because no one has seen it, however, hardly anyone doubts about its existence. Therefore, I would like to ask you to take the said below as you take such a nonsense like the theory of physics. As defined by one humorist, the science is the "graveyard of hypotheses" and I agree with him completely. And now the real fairy tales. Of course, I’m not going to tell you fairy tales, but sometimes we need to go beyond conventional views to explain some things, and people usually take it uneasy. Uneasy, I know, but no matter how crazy it may seem, sometimes it should be done, despite the fact, that the proposed theory may be incorrect. Theory of Lobachevsky was so "stupid", that his friends considered him insane and placed the scientist in an insane asylum for his own safety. Later it turned out, that they were wrong.

Let start the "fairy tale". They say, we live here as on a "neutral" planet and if we behave badly, then we'll go to HELL, and if we make good things, then we'll get in HEAVEN. In HELL they will torture us and do other bad things with us, and in HEAVEN we'll get comfort and home. It seems to me, that these stories have their validity. I'm not going to excuse myself for my adequateness, but I just try to analyze, keeping in mind the theory of Niels Bohr and other things invisible to us. According to its definition, HELL is a place, where the souls suffer for their sins, and HEAVEN-where they find peace and satisfaction from things they've made.

I do not know, where we are, but certainly not in HEAVEN. Don't be afraid of HELL, we're here! Wars, rapes, murders of children. Are these signs of HEAVEN? I don't think so, it's worth long discussions, but what we have here is symptomatic. In the East for thousands of years they hand down a theory of existence of many worlds and our world is not the central one. As a block of flats has good or worse apartments and the choice depends on your earnings. Now, just imagine, if really nothing happened within billions of years? Have we for some reasons become "the crown of creation" within the last 20000 years? It's just not serious and even shameful to talk about it. I'm not going to touch upon all concerning me questions in this article, but I have a lot of them. I was a secretary of Komsomol organization and never thought, that I would focus on theology; but if I can't find the answer in all information I was taught, I have to look for it "where it should not be." But it is there and the confirmation is my website and hundreds of videos, that I'm tired of shooting and certainly not all patients agree to film. What about the medicine, I can say the following and this is my personal opinion. In my opinion, the medical theory is fundamentally wrong.

There are two reasons. The first one is nonsense and the second one is cunning and laziness (what is very common to our HELL). We should work and love each other, and then maybe we will be released from here. Although the things WE are committing here in any way do not lead to this. I understand that in your opinion I'm absorbed in mystics, but I'm not going to back away from my words. Of course, I set out my idea disconnectedly, but I think that it is permissible, as I felt it for a long time and had no idea how to express it. I will not ask You to pardon me for such a statement of the question, because I know that many people will understand me, anyway, even if I'm wrong and it remains to be seen, I think, that I haven't harmed anybody. I would like to finish my article by things concerning me. People often ask me, what the course is, how many procedures are necessary to get better? I say- according to your state of health. If you feel discomfort, make them, if not, then do not make them, just live peacefully and happily. The fact, that we live in a place called HELL is too bad, but for some reason we are here, and our children are here too, so let's change and to get out of this place. I know, that my words at first seem insane, they say, we do see that around, so do not " fool children."

Just think about virtual reality. Our children believe, that computer game is the reality where they live. I do not know about your children, but my Sasha is sure in it. Is it not, that we are the

children cheated by more "adults"? I think we're exactly like that, it's for your judgment, but I just could not say it.

*Sincerely, Andrey Ponomarenko.*
