"Hello, a good explanation of how this method works is its similarity to our work in Karlovy Vary /Czech Republic/. We call it here "gas injections"; I'm a doctor in sanatorium and place on these injections. This method has been applied for a long time and it is very popular, regular customers come to us from America, Israel, Germany, Russia, Ukraine. This method is well known, because it was not easy to understand, how such an easy method can give such good results, but it still arouses mistrust and "smile". I would like to thank doctor Ponamarev for giving a good explanation how this works, although we make this method in other way/ we inject carbon 2-3 ml dioxide in refectory points along the spine and joints in amount of 8-10 in a day. It causes pain feelings. The principle is the same, the joints do not pain any more in some weeks after procedures beginning, i. e. already at home after balneotherapy."
