

**New Russian RANC method of treatment, what is it?** And what kind of Krasnodar? Now I will tell you about the most is not [the technology of the procedure for RANC method](#), and some of the new data using this method to treat disease and [Parkinson's syndrome](#), which were obtained in our Krasnodar in the last six months. This inspires optimism resistant to me personally and give not only hope, but also confidence in attaining the health of many people suffering from such a disease like Parkinson's disease. But let me first make a "lyrical" retreat, before giving you the information. This is due to the fact that the approaching Great Feast  
**Day of Victory**  
!

There geography, and have a history. If we talk about the geography, the Krasnodar region, being the most southern region of Russia (Sochi is subtropical) owns one of Russia (Novorossiysk) five major large ports. By area, it is 10 000 square kilometers more than a country such as Lithuania. Krasnodar has such unique resorts as Sochi Gelendzhik, Djubga, Hot Key, South Ozereyevka, Kabardinka Loo, Abrau Djurso, Arhipo-Osipovka Novomihaylovka, Golubickaya, Temruk. Relatively close located Pyatigorsk, Kislovodsk, Zheleznovodsk, Kabardino-Balkaria and Karachaevo - Circassia with his famous "Zelenchuk", then, Taganrog (birthplace of Chekhov), Rostov-on-Don, Primorsko-Akhtarsk and across the Kerch Strait is the Crimea, with its Yalta, Kerch, Sevastopol and Simferopol, not to mention the Feodosia, Yalta, and the smaller towns, which are abundant in this peninsula. Nearby, there is a beautiful Republic of Abkhazia and the Republic of Chechnya and Dagestan population of 40 nationalities.

This geography, which many are not interested. It is interesting to me, because I am a person, not born in this region, but brought my parents here at the age of 12 years. When I first saw this land, I was struck by the 'poverty' of nature, in comparison with the Primorsky Territory, where I was born. There Taiga, the Sea of Japan, the beauty, and then "desert", but I began to notice obvyksya and over time, that now have around me. Many things struck me, and after some confusion, I had to take a new, and it also surprised me.

This geography, which more knowledgeable people will be able to say much more, but I want to say about the history, which I'm also not an expert, but to recall some moments Krasnodar stories to me is not difficult. However, we must begin not with the countless spas and wonderful nature, so that it can not be proud of, is our "gift" inherited, such as Siberians "hard frost" that they, too worthless to be proud of.

On the eve of the seventieth anniversary of the Victory in the Great Patriotic War, we must remember the other. And what I suggest you remember? The fact that the invaders of our land, who wanted to enslave the fertile edges inhabited by different peoples, met stubborn resistance of the people living in these lands, (a native, I do not think). And they came up with "gas vans" to immerse to civilians that suffocated by exhaust gases derived in "Kung" exhaust pipes of cars

until they were transported for burial. This "thrifty" technology, these fanatics the first to use it in Krasnodar. Then, it became widely used. Therefore, I am not surprised that people Krasnodarians sat on rooftops and cheered as if they hang the traitors of the motherland and its people, who colluded with the enemy. That this video is at the beginning of the article. Sadists and forgive traitors who killed your wife, children and men is impossible.

I was not born in this land, I generally did not exist, and my grandfather lived far away in the Far East (near Vladivostok my hometown Artem), where Stalin, despite the significant, perhaps a mortal threat to Moscow and Leningrad, held in opposition seized China Japanese Kwantung Army's 40 divisions selected, unspent battles with fascists troops.

I have grandparents asked, "Oh, you think that is true, one month fight?" They told me it did not respond. At the end of the defeat of the Nazis, Stalin ordered to "overtake" the Far East a few tens of thousands of people with equipment and weapons from the Western Front. To be curious, he will be able to find the exact figures, but now it's not in my plans. For a couple of months on the border with China formed a large group of Soviet troops, which "cleaned" China by the Japanese just one month. All caught the Japanese captured and then they rebuilt the Far East cities and towns. My grandfather took part in the operation, and, thank God, are alive, otherwise I would not have, and you have not read these lines.

Then the Americans dropped their atomic bombs on Hiroshima and Nagasaki. Why dropped? Understand why, it's just economically and scary.

And, what's the **Krasnodar and RANC method of treatment** ? All prosaically, I was born there, have long lived here, and I think this place is their mother. I am become a doctor and help sick people as its features. Not only here, we have developed a unique method of treatment and in terms of theory and practical results obtained. We published their findings on the Internet, create a website, find like-minded people in many cities of Russia and the former Soviet Union (and not only), communicate and try to improve their professional skills in order to benefit not only your family and friends, but as many as possible needy.

To this end, we have created RANC Association and invite all. We are waiting for like-minded people who are willing to share with us the joy of creating the new in order to improve our quality of life and the lives of our loved ones. I have no doubt that the proposed theory that the **cause of our diseases lies in the violation of the nerve centers of activity** caused by excessive load on the central nervous system of stress factors, will be improved by enthusiasts of the business. Although

### **treatment RANC**

16 years shows its effectiveness in the treatment of many diseases, I believe that over time will open new patterns in the nervous system, allowing to provide medical care to the best.

An example of this I consider the theoretical and practical "breakthrough" in **the treatment of Parkinson's disease and syndrome**

, which on the basis of 90% of the results obtained today cases wrongly considered **neurodegenerative diseases**

. One can cite at least two arguments in favor of this statement. The first is that according to our statistics preparations

### **of L-Dopa is**

, like the whole small list of drugs used to treat this disease, have no effect on the 25-30% of patients. If we compare the situation with the first type of diabetes (in which the insulin-producing cells die), it can be noted that a person with adequately selected dose of insulin administered by injection live quite comfortably. In the case of Parkinson's every third it does not work, therefore, it's not in the death of dopamine-producing cells.

The second argument in favor of the fallacy of the theory of **neurodegenerative origin**

### **Parkinsonism**

, is even more obvious than voiced above. If patients recover by getting rid of their symptoms, so the death of neurons can not talk, otherwise the healing would not have occurred that have died, it died. The only pity is that, unlike other pathological conditions, such as for example, as a

[defeat of the trigeminal nerve](#)

,  
[herniated discs](#)

,  
[migraine](#)

,  
[epilepsy](#)

, and many others, in Parkinson's treatment takes 2-5 treatment sessions carried out for 3-5 months, and much more a longer time. According to my observations (excluding the "miraculous" cases) treatments performed 4-5 weeks apart,

***lead to permanent restoration of disturbed functions for 1-2 years.***

As regards the "resistance" received the results of treatment, it is too early to judge, because the problem of the treatment of Parkinsonism close, I took a little over 2 years ago and have not yet accumulated a sufficient statistic, however, is that there is already, gives hope that the result will be long-lasting. And I want to say about the diagnostic system of this pathological condition. In my opinion, it is not perfect due to the fact that as long as the person does not appear the whole "bouquet" of his symptoms, this diagnosis is not set, but it is a loss of valuable time that can be consumed on the to start treatment earlier. Any cases of stiffness in the body or a limb, as well as the appearance of tremor, in my opinion, it is necessary to treat this syndrome, ie the diagnostic system to be changed towards a higher incidence raising this diagnosis. Cancel a provision stating that it was "a neurodegenerative disease occurring in older people," as people become ill at the age of 20-30 years and even younger very much. The whole point is in the erroneous diagnosis of a system that restricts the doctor narrow bounds and interfere with diagnosis in the early stages of development of this very common disease, and therefore **time to begin treatment**

Slightly severe symptoms of this syndrome occur ten times more often than the diagnosis is exposed. Any cases of complaints on the stiffness, "naughty" limbs, manifested externally or internally perceived tremors, should immediately refer to the initial manifestation of Parkinson's syndrome. This expansion of the indications for diagnosis should not confuse what is observed today, when the disease is wrongly considered to be incurable. It is in fact incurable and causes a person a shock when he endure such a "sentence," but it is "incurable" is using pharmacotherapy, if applied **RANC method in the treatment of Parkinson's disease** , it

ceases to be incurable. Just have to do it in time, then the results will be different than the ones that we see now that the powerful and extremely wealthy people can not have a decent medical care and health. Reading these lines, you are in fact no accident plunged into the article topic, then it is you personally care about and, therefore, you know the names of the people I'm talking about. The late Pope John Paul II, Muhammad Ali, Dzhordzh Bush Sr., mother of the owner of Google Sergey Brin. I will not list continue You yourself know it, it is paradoxical in view of the fact that not a billionaire and president, but ordinary people in Russia this assistance now receive, and for the cost of breakfast, the same President Bush (and sometimes less, I I do not know how much he is paying for the breakfast).

**New methods and technologies of treatment of diseases, especially Parkinson's disease** should be implemented and how actively you can.

**Russian RANC method of treatment**

is well placed to become not just a national, but also international, which is already proving its application in different countries.
